

Originally a sculptor and jewelry designer, Rob Hordijk (The Hague, The Netherlands) has established himself over the years as an expert in sound synthesis technology. In the last couple of years he specializes in hand-build analog electronic instruments that have distinct sonic signatures, instruments that are somewhere between musical instruments and objets díart. His instruments are used in live performances by a number of established improvisors all over the planet. An example of an instrument designed by Rob is the Blippoo Box, featured in the upcoming 19th issue of Leonardo Music Journal.

Rob has been teaching, lecturing and conducting workshops since 1983 at a number of institutes in The Netherlands, and occasionally in other places on this planet.

In the DIY workshop (conducted in cooperation with his buddy in electronic madness Joker Nies) participants will build a kit of an analog electronic instrument named the Benjolin. The Benjolin is a "noise box" that is "bent by design", meaning that it always has a definite amount of unpredictability while it is still intuitive to play. The Benjolin features two eighteen-octave range voltage controlled oscillators that drive a "rungler' circuit, circuitry that in essence uses a special interference technique feeding back into the oscillators to force them into wild chaotic behaviour. A special slightly chaotic filter is both excited and modulated by the signals from the rungler circuitry processes, producing sounds between fat drones to grungy noise havoc.

I met this guy in Cologne this August. He jammed his Banjolin for me, and l pronto flashed to all my boingy baltimore homeys devouring the sonic squishes within. He told me- to get it, you have to work with me, in a 'Work-Station.' And then we're talking about some real drippy Burgundy food and I'm like far-out, let's do it! In the developing tradition of the 'Work-Station,' I offer my humble services as organizer and chef for this event." Peter B, ciat-lonbarde.net

http://web.me.com/klangbureau/DIY/Workshop.html NOTE: YOU GET TO KEEP THE SYNTHESIZER! YOU CAN ONLY GET IT BY BEING "IN WORK-STATION" THE LATE NITE JAM WILL BE OPEN TO THE PUBLIC

## **Vork-Station**

Pratt Friday 10/23, noon to midnite, at T-Hill Work Station: participants build Benjolin analog synth, then dine at a ∄ Burgundy feast with spirits, then there will occur a late-nite open- $\infty$ 211 house jam -session with the synths. Rob Hordijk: Synth Guru, Joker Nies: Performance Artist, Peter B: Chef, Caleb Johnston: Trappist Brewer. There will be no more than 10 participants, so you need to reserve a place ASAP. The price is \$99.

potential for baked swan, harvested by shaman

lamb leg, prepared with papaya and colonial spice trappist ale, for inebriation and t'boil th'hare Burgundy cooking comes from Belgium, and it is a mixture of trilled Flemish tastes and sensible French Gourmanderie. This is epitomized in the symbol of "Trappist Ale," a rarefied brew of exceptional viscosity, a Franco-Flemish simulation of gold, vis a vis Rembrandt's "Self-Portrait with Gold Chain and Beret". Recipes will likely include "Hare boil'd in Chimay", Baked Swan, and Lamb Leg with Colonial Spices.
